

Oil In The West

FOR THE LAST THIRTY YEARS the people of the West have been accustomed to the fact that there were rich oil supplies in the Turner Valley in Alberta. It was realized that since there was oil there, it might be also found elsewhere on the prairies, but it is only recently that other extensive developments in the oil industry have taken place. Since the last war rich fields have been opened up near Edmonton and an extensive search for oil has been carried out in many parts of Manitoba, Saskatchewan, and British Columbia as well as in Alberta. It is now believed probable that there are many potential oil fields in these four provinces and there is reason for optimism over the effect which the discovery of new fields will have upon the economic future of this part of Canada.

Effect Shown In Alberta

Alberta is the first province in which extensive developments have taken place, and the effects which the successful operation of oil fields may have upon the prosperity of the country has been shown there in several ways. Results of the recent census have shown that Edmonton has expanded more than any other Canadian city in the last ten years and there is no doubt but that the oil industry has been responsible for a great deal of this expansion. At the present time a chemical plant, valued at \$60,000,000 is being built near Edmonton, and because of the cheap natural gas and other by-products of oil, it is expected that other industries will soon seek locations in Alberta. These are two of the many ways in which the discovery of oil has benefited this province.

Much Capital Is Invested

As supplies of oil in other parts of the world become less plentiful the importance of new oil fields in Canada is becoming more and more apparent. Millions of dollars have been put into the search for oil and there are many signs throughout the West of activity in this field. Canada is believed to be ready at this time for a rapid and economic expansion. Oil is only one of this country's many rich resources, but the oil fields in Western Canada will undoubtedly be an important part of any future economic expansion in Canada. To the people of the West, the discovery of extensive oil fields will mean many changes and will bring many benefits to large numbers of the people there.

"Mail-Order" Car License System Succeeds

WINNIPEG—Manitoba's "mail-order" system for issuing drivers' licenses was termed a "great success" by R. B. Baillie, commissioner of taxation. Mr. Baillie said the public was responding well to the newly instituted system and that "the bulk" of applications had been returned with accompanying money orders. It was too early yet, however, to estimate the exact percentage of driver applications returned, he said. Passenger car registration applications are now being sent out at the rate of 20,000 per day. Officials pointed out that if car owners bring in their auto license forms soon after they are received they should be able to get their plates in "about three minutes."

MINER'S EARNS SAVE FAMILY FROM DISASTER

TREDEGAR, Wales.—Mike O'Connell of Tredegar is a miner whose ears have been trained by years underground to the ominous warning of shifting earth and stone. He was sitting at home with his 11 children when he heard what miners call "a rattle." Immediately he bundled all the children out from the front door and followed himself. Two minutes later half the house collapsed.

Patterns

Easiest Ever!

Now look here, Bill. What are you going to get? Aren't we paying you up yet? It's my conscience. It tells me I'm keeping some horse out of a job. He: "Since you do love me, why did you refuse me at first?" She: "I wanted to see your reaction." He: "But I might have run down those stairs and out of your life for the top of the stairs."

Four card sharps got together on the train and a sense, hard-fought contest ensued. Suddenly, the dealer tossed his cards down and said: "This game is crooked."

"What makes you think so?" queried the card sharp on his left.

"I can tell," replied the dealer, "because that guy is not playing the same hand I dealt him."

"I have noticed with astonishment," remarked the old-timer, "how reluctant young men these days are to marry and settle down. They actually seem to fear marriage. Why, before I was married I didn't know the meaning of fear."

From Australia comes the story of the kangaroo which, after passing several times one day to scratch her stomach, yawned two baby kangaroos from her pouch and thrashed them soundly for eating crackers in bed.

The trouble with most open minds is that they are open at both ends.

MONTANA OIL WELL IN PRODUCTION

TOULON, Mont., Aug. 15. (AP)—Dr. A. Ash, president of Shell Oil Co. of Canada, Ltd., said that Shell has brought into production its Northern No. 1 well in the Richley area of Montana, with a flow of 1,850 barrels of 38-gravity crude oil in the first 24 hours.

There are 33,984 miles of railroad in India.

Something Nice For Christmas

WINNIE'S BAKERY
IN DAYS

Santa, buy me one of these! It's a plant-size model car on display at a Washington motor show and can burn up the highway at 15 miles per hour with a nine-year-old at the wheel.—Central Press Canadian.

Lethbridge Once Shipbuilding Town During Wild West Era

Barges and Steamers Were Needed To Transport Coal Before Railways

LETHBRIDGE, Alta.—This Alberta city once in the heart of what was known as the wild west, was at one time of shipbuilding centre and port of embarkation too. It built steamers and barges — to sell coal.

Lethbridge owes much of its prosperity to coal — it was originally known as Coal Bank and to Sir Alexander Galt, one of the fathers of confederation, and Elliott Torrence Galt, who directed the Galt enterprises that helped to open up this part of southern Alberta.

The Galts began developing the coal found on the west bank of the Oldman river by a Nicholas Sheran had broken his own train, found his own markets and sent the coal by ox team 200 miles to Fort Benton, Montana.

When Galt started in the fuel business, though, the Canadian Pacific Railway was inching its way westward over the prairie.

The railway agreed in 1884 to take coal from the Northeast Coal and Navigation Company operating at its feet and Lethbridge as it became known in 1885 in tribute to the coal company's president, William Lethbridge — on the map as a shipbuilding port.

The problem was to get the coal to the railway which was to take delivery at Medicine Hat.

Material for three steamers and 16 barges was brought by teams the 200 miles from the main C.P.R. terminus at Swift Current, Sask., to Lethbridge, and lumber was hauled 60 miles from the Porcupine Hills to the town.

School Boys Curling Playoffs At Moncton

WINNIPEG—The Canadian school boys' curling championships will be held in Moncton, N.B., Feb. 18-21, C. H. Seymour, secretary-in-charge of the school boys' committee, Dominion Association, announced.

The games will be played at the Beaver Curling Club under the auspices of the Moncton and Beaver Clubs.

Ken Watson is Dominion committee chairman, with Russell Bennett of Moncton, playdown chairman.

Rinks from every province are expected to compete for the championship. The shipbuilders apparently didn't take into account the fact that the city had to get back to Lethbridge for more coal. They apparently used just as much coal getting the ship up there as they had cast downriver.

SPARE-TIME STUDIES POPULAR WITH TROOPS

OTTAWA.—Some 100 Canadian troops in Korea are going to school in their spare time. The defence department said the soldiers are busy with homework in slit trenches, tanks and gun positions.

The correspondence courses are available through the Veterans Affairs department and include diesel engineering, physics and poultry raising. Papers are sent to Canada for marking.

Saskatchewan's Search For Oil Has Doubled In 1951—Discoveries Are Promising

In a recent issue of The Financial Post the following report gives a very informative outline of the progress being made in search of oil prospects in the province of Saskatchewan:

"Although there have been no sensational finds of the Leduc variety that ushered in Alberta's oil boom, there have been several important finds in Saskatchewan in 1951 so far and oil future of this province has never been brighter since the major oil play started in the spring of 1949. Virtually all production and exploration records will be broken this year according to present indications, despite adverse weather conditions which have slowed operations during most of the year.

However, it is still expected that the expenditure in exploration will reach at least the \$20 million mark this year compared to about \$10 million in 1950.

Oil discoveries in Montana and North Dakota this year, at a distance of 100 to 100 miles south of the Saskatchewan border, have increased interest in the Williston Basin area of Southern Saskatchewan and it is here new oil prospects have been discovered.

It is partly this interest in the deeper part of the sedimentary basin that has resulted in a marked trend this year towards deep test wells. In 1950 there were 55 wildcat test wells drilled to an average depth of about 2,500 feet. At the end of October of this year there are more than 50 wildcat wells drilled or drilling with an average depth of 5,000 feet.

The hottest game area in Saskatchewan this year has been the area within a 50-mile radius of Kindersley in the west-central portion of the south-western province.

More than 40 miles from Alberta border and 120 miles southwest of Saskatchewan this year, a new heavy crude was struck in two wells drilled at Hester's Hill, 30 miles northwest of Kindersley. These wells have been drilled in production, but there are indications that the difficulties may have been overcome and the wells definitely will become producers this opening a new heavy crude field in the province.

This was followed up this year by the discovery of a heavy crude at Kenaston, 20 miles southwest of Kindersley, in the Husky-Phillips Eaton, Ltd. well.

It is well known that heavy oil production from this area yet but a second well was drilled near the first and another is now drilling in an effort to determine the size of the possible producing area.

The third of the recent heavy crude finds was made early in September at Coleville, about 100 miles north of Kindersley. Four more wells are being drilled or have been completed near the discovery well—Hoy, Altie—Abercrombie Coleville No. 1—to outline the producing potentiality of the area and a study program of test run on Coleville No. 1 last September produced over 700 barrels of crude.

Coleville No. 1 was also a major gas discovery with a reported open flow of 10 million cubic feet per day. However, there has been no report of being brought into production as a gas producer. Further gas finds have been made recently in two of the Coleville development wells.

Another major gas discovery was made near Brook, 20 miles east of Kindersley and 30 miles southwest of Coleville. Brook No. 1 has an open flow of eight million cubic feet per day and has been completed as a gas well although no production has begun as yet pending marketing arrangements.

However, the search for light oil was not quite so successful. In July a "favorable show" of light oil was discovered in the Slocyn-Vacuum Prairie Tompkins No. 1 well near Tompkins, 50 miles southwest of Swift Current, and 100 miles south of Kindersley. The well also had an open gas flow of better than two million cubic feet per day but was abandoned.

The most promising light oil strike came in September at the Shell Oil Co. Dahlinda No. 1 located about 50 miles south of Regina. "Medium brown" oil of 20 to 25 degrees gravity was struck early in September and later in the month a flow of about 33 degrees gravity was discovered.

However neither find proved to be of commercial importance.

The result is that while this year to date has proved to be by far the most intense and most encouraging since the search for oil began in Saskatchewan, the "bonanza" still eludes the province.

That the failure so far to discover light oil in commercial quantities has not discouraged the province's oil industry is indicated by statistics. They show an increase in exploration in virtually every aspect of the oil play, including an increase in the number of companies and individuals holding land under permit from 65 last year to about 80 at present.

Despite adverse weather conditions which slowed the movement of heavy equipment throughout much of the year, new highs were reached in every phase of the exploration program. The number of deep test wells alone is expected to reach 70 by the end of the year compared with a total of 77 for all wildcats drilled in the province in 1950. A total of 72 wildcat wells have been drilled or are drilling to date this year.

Last year there were only 23 "oil" wells drilled compared to 55 this year compared to 212 up to the end of October, this year.

There has also been a marked increase in the amount of preliminary exploration work.

Despite adverse weather conditions which slowed the movement of heavy equipment throughout much of the year, new highs were reached in every phase of the exploration program. The number of deep test wells alone is expected to reach 70 by the end of the year compared with a total of 77 for all wildcats drilled in the province in 1950. A total of 72 wildcat wells have been drilled or are drilling to date this year.

There has also been further expansion this year in the host of oil fields of the Lloydminster area. About 50 development wells have been drilled in the area this year to bring the number of producing wells from a high of 152 in 1950 to 185 at present. The increased market for heavy crude, particularly as a railway diesel fuel, has been a major reason for this expansion.

Through production from these fields, Saskatchewan has been down second place among the oil producing provinces since 1947, and last year passed the million-barrel mark. This year production to date to Sept. 30 amounts to about 924,000 barrels compared with about 750,000 barrels at the same time last year. If present rate of production continues, the field is now entering a high production period, the total 1951 production should easily surpass the 1,000,000 mark.

Natural gas production in the Lloydminster, Unity and Lone Rock areas has also shown a sizeable increase. In 1950 some 816 million cubic feet were produced while figures to date this year indicate that recovery is running about 15 per cent higher.

The first museums of art were established during the Renaissance.

HERE AND THERE

The Order of Eastern Star installed their officers for the ensuing year on Saturday evening, in the Masonic Hall. There was a very large attendance of members. Members of other Chapters came from Bassano, Hussar, Strathmore and Calgary.

If we all spend our money in the other town who is going to keep things going in our town.

A real old fashioned chinook struck the district Tuesday morning. What snow there was melted in a short time. Rain fell and turned the roads into slippery streets.

The Board of Trade was to have held a regular meeting last Thursday night. The meeting was postponed indefinitely.

The squad of curlers got busy Monday evening and removed the dance floor from the rink. They are now already to flood and make ice. Ice making will begin just as soon as the weather turns colder. For a month or so the curlers had a tired feeling and that is the reason the floor was not taken up before now.

We have received a letter from Harry Carreck, who resides at Duncan B.C. He wishes to be remembered to all his friends and to Mrs. Carreck with them all a Merry Christmas and a Happy New Year.

If a youngster can boss his pa and ma he is probably endowed with great executive ability.

Some of us can hardly wait until we're seventy so that the government can start taking care of us.

The only difference (well almost) between Calgary and our home town is that we don't get a creek on our neck looking at the tall buildings.

It is no longer a social handicap for a man to possess only one shirt. Nylon tricot shirts with fused collars and cuffs can be washed at night and will be dry to wear the next morning. No ironing is required as the wrinkles fall out when the shirt is hung up to dry. A nylon shirt has several times the life of an ordinary shirt tests reveal.

According to the preliminary census issued Alberta has a population of 928,552 and increase of 146,387 since 1941. The percentage increase is 17.6.

CARD OF THANKS

We extend this word of thanks for the many kind acts of sympathy expressed by thoughtful friends. These kindness have meant much to us.

KIRSTEN FAMILY

PLAIN SEED SUPPLIES NOW

The seed grain situation in Alberta will be very serious next spring unless farmers take action now, warns J. E. Birdsell, supervisor of Crop Improvement Department of Agriculture. The large acreages of wheat in the swath or still uncut cannot be counted on for seed. Barley seed supplies should be adequate, but are not well distributed. Oats for seed will likely present the most serious problems because of frost damage and the large acreage still unthreshed. Grain subjected to freezing and soaking, as well as to drying and thawing is extremely unlikely to germinate satisfactorily, says Mr. Birdsell. A germination test made on grain threshed in advance by hand will indicate how well the grain will germinate when it is finally threshed. The deciding factor may be the weathering that takes place in the early spring.

Grain that is being reserved for seed should be routinely dry, warm over 10 percent moisture and should be tested for germination. Germination results on damp grain may be very misleading, as too much moisture in advance do not give an accurate picture of how well or how poorly grain will germinate when seeded.

Germination tests may be made at home in soil or between blotter that are kept moist. They may also be obtained by taking a sample to an elevator agent, who will send it for testing. It should be remembered, however, that the only tests on which seed can legally be sold are those made by the Plant Products Division, Dominion Department of Agriculture, Calgary.

Canada has the highest per capita metal production of any country in the world.

Canada has some 150,000 disabled persons of working age. Many are veterans of the Second World War.

FREE SEED GRAIN TESTS

Frost will cause low germination in seed grain, particularly oats and barley. Arrange free germination tests through your Alberta Pacific Agent.
